

Nicholas Stanislawski

IDENTITY & ACCESS MANAGEMENT (IAM) ENGINEER

(561) 306-3310 | nick.stanislawski@outlook.com | Matthews, NC 28105 | [linkedin.com/in/nickstanislawski](https://www.linkedin.com/in/nickstanislawski) | github.com/nickstanislawski

SUMMARY

Identity & Access Management (IAM) Engineer with four years of IT operations experience and hands-on identity administration and IAM engineering experience. Experienced in identity lifecycle management, access governance, SSO and federation, privileged access, and IAM automation across production and lab environments. Combines operational experience with an engineering-focused approach to securing and automating identity environments.

SKILLS

Identity & Access Management: Entra ID, Active Directory, Okta, Identity Lifecycle Management, Joiner, Mover, Leaver (JML), Provisioning & Deprovisioning, Role-Based Access Control (RBAC), MFA, Least Privilege

Identity Governance & Federation: Identity Governance & Administration (IGA), Access Reviews & Certification, SoD, SSO, SAML 2.0, OAuth 2.0, OIDC, SCIM, Conditional Access

IAM Automation & Integration: PowerShell, Python, Microsoft Graph API, REST APIs, API Integration, Workflow Automation, JSON, Git

PROFESSIONAL EXPERIENCE

IT Operations Lead | Rick Hendrick City Chevrolet

January 2022 - Present

Charlotte, NC

- Serve as the sole on-site IT resource for a 200-user environment, managing technology operations and resolving endpoint, application, connectivity, and access issues to maintain business continuity.
- Administer more than 1,000 user accounts across Okta, Microsoft, eLead, and dealership systems, managing provisioning, permissions, authentication issues, and account lifecycle changes.
- Manage approximately 150 identity lifecycle events annually across onboarding, offboarding, and role changes, provisioning and modifying Okta and Microsoft access based on job responsibilities.
- Conduct quarterly access reviews, identifying outdated accounts and unnecessary permissions and coordinating remediation to maintain least-privilege access.

SECURITY PROJECTS

Enterprise Identity Lifecycle & Provisioning Automation

<https://nickstanislawski.github.io/portfolio/>

Active Directory • Okta • PowerShell • REST APIs • SCIM • RBAC • MFA • JSON

- Engineered an automated identity lifecycle environment for 50+ simulated identities across five departments and 10 role profiles, integrating Active Directory and Okta for role-based provisioning and access management.
- Automated Joiner, Mover, and Leaver workflows using PowerShell and REST APIs, provisioning, modifying, and revoking role-based access as identities changed.
- Implemented RBAC, MFA, and automated group assignment across Active Directory and Okta based on department and job-role attributes.
- Built validation, exception handling, and audit logging, testing lifecycle workflows across 15+ provisioning, access-change, deprovisioning, and failure scenarios.

Identity Governance & Access Certification

<https://nickstanislawski.github.io/portfolio/>

IGA Platform • Active Directory • Okta • RBAC • Access Reviews • Access Certification • PowerShell • REST APIs

- Engineered identity governance for 50+ simulated identities across five departments, governing 25+ entitlements across five applications through role-based access and certification policies.
- Built access certification workflows evaluating 50+ access assignments, supporting approval, revocation, modification, and escalation of inappropriate access.
- Implemented RBAC and 5+ Segregation of Duties (SoD) controls, identifying excessive, conflicting, stale, and orphaned access for least-privilege remediation.
- Developed access request, approval, and audit workflows, capturing reviewer decisions and remediation actions to produce traceable governance evidence and compliance reporting.

SSO & Federated Identity Engineering

<https://nickstanislawski.github.io/portfolio/>

Okta • Microsoft Entra ID • SAML 2.0 • OAuth 2.0 • OpenID Connect (OIDC) • MFA • REST APIs • Web Applications

- Engineered federated SSO for 50+ simulated identities across 5+ applications, integrating Okta and Microsoft Entra ID using SAML 2.0 and OpenID Connect (OIDC) for centralized authentication.
- Integrated 5+ applications with role-based SSO and MFA, mapping identity attributes, groups, and claims across 10+ role profiles.
- Implemented OAuth 2.0 and OIDC flows, configuring tokens, scopes, redirect URIs, and claims for secure application and API access.
- Validated federation across 10+ test scenarios, troubleshooting claims, unauthorized access, redirect URI errors, token failures, and authentication policies.

Identity Security, Privileged Access & Automation

<https://nickstanislawski.github.io/portfolio/>

Microsoft Entra ID • PIM • Okta • PowerShell • Microsoft Graph API • REST APIs • JSON • Identity & Audit Logs

- Engineered privileged access controls for 10+ administrative identities across 5+ roles using Microsoft Entra PIM, Just-in-Time (JIT) access, time-bound assignments, approvals, and MFA.
- Automated 5+ identity security checks using PowerShell and Microsoft Graph API, identifying persistent privilege, stale accounts, excessive roles, and high-risk access.
- Implemented automated remediation workflows, revoking unnecessary permissions, removing persistent privilege, and enforcing time-bound access.
- Analyzed Entra sign-in and audit logs across 10+ security scenarios, investigating privileged activity and generating traceable security evidence.

EDUCATION

Western Governors University

June 2026

Bachelor of Science, Information Technology
